

## Open 7 days 10-6pm ‘Loving fish, caring for people’

We work extrahard to ensure our fish  
are the BEST quality & health!

### It is important to introduce your fish correctly to reduce stress & potential disease!

- 1 - Ensure your filtration & water quality is correct!  
If it is a Cold water or tropical aquarium (Without a sump filter & GOOD back drop filter)  
Under gravel filters with a good power filter is HIGHLY recommended.
- 2 - Immediately add 1 inch water to the bag (From your aquarium) every 5 minutes until the bag is FULL (20min-30min)
- 3 - ADD a preventative medication & stress coat (Like Melafix/Pimafix OR a broad spectrum medication) Unless YOU have a quarantine tank, this will greatly decrease chance of a disease. (Fish get disease by going into bad water quality, change in temperature & stress, by being moved or being harassed by other fish)
- 4 - When ready to add fish feed your existing fish down one end of aquarium while you tip (sneek in) the new fish the other end of tank.  
Ensure You have plenty of plants, wood, rocks or ornaments to provide adequate hiding places
- 5 - Feed a variety of good quality foods, flakes, pellets, freeze dried & frozen 4-6 different types would be good to build immune system & increase health & colour of your fish.  
DONOT overfeed, But feed 1-3 times per day SMALL amounts that should be consumed within 30-90 seconds
- 6 - If you want to keep fish successfully YOU MUST OWN the correct TEST KITS (min x3) to ensure you keep your water correct.
- 7 - Do 1/4 water changes weekly OR 1/3 fortnightly using a gravel cleaner

### Problems with newly purchased fish?

WE are here to help YOU & run an honest experienced business in fish & aquariums.  
If you loose fish within 3 days ?  
Please bring fish & 1 cup of water from the aquarium & we will assess the situation.  
(Please read a guarantee on our website or posted instore)  
Remember ... It all comes down to WATER QUALITY
